Summary

Improving the quality of water discharged from agricultural watersheds requires comprehensive and adaptive approaches for planning and implementing conservation practices. These measures will need to consider landscape hydrology, distributions of soil types, land cover, and crop distributions in an integrated manner. The two most consistent challenges to these efforts will be consistency and reliability of data, and the capacity to translate conservation planning from watershed to farm and field scales. The translation of scale is required because, while conservation practices can be planned based on a watershed scale framework, they must be implemented by landowners in specific fields and riparian sites that are under private ownership. To support these goals, it has been necessary to develop planning approaches, high-resolution spatial datasets, and conservation practice assessment tools that will allow the agricultural and conservation communities to characterize and mitigate these challenges. The field boundary dataset represents a spatial framework for assembling and maintaining geospatial data to support conservation planning at the scale where conservation practices are implemented.

Description

This 6-year land-use summary table has been assembled to support field-scale agricultural conservation planning using the USDA/ARS Agricultural conservation Planning Framework (ACPF). The original data used to create this database are the NASS Crop Data Layer datasets and individual HUC12 watershed field boundary feature classes. For each of the last six years, 2015-2020, the dominant (majority) land use and its percentage of the field's area have been used to assigned land use each individual field polygon (e.g 'maj19' and 'pct19'). This summary information for each field are assigned, including; a six-year crop rotation string, a crop summary string, a continuous corn count, a mixed land use count, and a general land use class.

FIELD GenLU ►

* ALIAS GenLU

* DATA TYPE String

* WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

General Land Use is assigned to each field based upon the majority land use, as derived from the NASS Cropland Data Layer, for each of six years, 2015-2020. The use codes are concatenated over the period into a rotation string, e.g. 'CBCCCB', and evaluated based on the distribution of uses, majority percent of the field, and occurrence of continuous corn. The GenLU field is concatenated from both the PrimeName and OneName fields in the ACPF land use rasters (e.g. WSCDL2020)

DESCRIPTION SOURCE

USDA/ARS

Hide Field GenLU ▲

FIELD **AgLandUse** ▶

- * ALIAS AgLandUse
- * DATA TYPE String
- * WIDTH 255
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

Agricultural Land Use is assigned to each field based upon the majority land use, as derived from the NASS Cropland Data Layer, for each of six years, 2015-2020. The use codes are concatenated over the period into a rotation string, e.g. 'CBCCCB', and evaluated based on the distribution of uses, majority percent of the field, and occurrence of continuous corn. The AgLandUse should be considered a slightly more detailed description of land use than GenLU, as it aggregates only PrimeName values to form its result.

DESCRIPTION SOURCE

USDA/ARS

Hide Field AgLandUse ▲

FIELD **CropRotatn** ▶

- * ALIAS CropRotatn
- * DATA TYPE String
- * WIDTH 255
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

The dominant (majority) land use codes are concatenated over the six-year period into a crop rotation string, e.g. 'CBCCCB'. The land use codes (ROTVAl) are:

C-Corn,
 B-Soybean,
 E-Sugarbeets,
 F-Forest,
 p-Grapes,
 G-Sorghum,
 I-Idle,
 J-Rice,
 L-Double crops,
 N-Cotton,
 P-Pasture,
 R-Other,
 T-Water,
 W-Wheat,
 U-Developed,
 X-Barren, clouds, no data,
 a-Nuts,
 d-Fruit,
 g-SmallGrains,
 m-Legumes,
 o -OilSeed,
 q-Orchards,
 v-Vegetables

DESCRIPTION SOURCE

USDA ARS

Hide Field CropRotatn ▲

FIELD **CropSumry** ▶

- * ALIAS CropSumry
- * DATA TYPE String
- * WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

The Cropsumry field concatenates the number of occurrences of a summary land use value (ROTVAl) with the summary value to represent a summary of land use, such that;

C3CB - 3 years corn, 3 years soybean

C2B1P3 - 2 years corn, 1 year soybean, 3 years pasture/grass/hay

DESCRIPTION SOURCE

USDA/ARS

[Hide Field CropSumry ▲](#)

FIELD CCCount ▶

* ALIAS CCCount

* DATA TYPE String

* WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

Continuous Corn Count. The number of occurrences of 'CC' in the crop rotation string, e.g. 2/6, would suggest that there are 2 occurrences of 'CC' in the six years of the rotation. Both of the following conditions would exhibit 2/6...

CCCBCB

CCBCCB

DESCRIPTION SOURCE

USDA/ARS

[Hide Field CCCount ▲](#)

FIELD MixCount ▶

* ALIAS MixCount

* DATA TYPE String

* WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

A count of the number of years where the dominant land use percent of the field falls below 75%. Referenced as the number of years mixed out of all years, e.g. 2/6 is two years out of six.

DESCRIPTION SOURCE

USDA/ARS

OVERVIEW DESCRIPTION ▶

ENTITY AND ATTRIBUTE OVERVIEW

The land use assigned to the fields in this table are derived from the NASS Crop Data Layer for each of the six years in the period of record. For the majority assignment (e.g. maj19), the field is assigned as per the VALUE field below, which is the original NASS CDL value. For the summary fields, the crop rotation string (CropRotatn) and the crop summary string (CropSumry).
